

Assignment 1 - 0.0.0

Building Your Brand

The most important part of this project is your brand. Since you don't have a University to back you up, you need to be your own representative. This is going to involve selling yourself hard on the internet, lots of flare, and documenting everything you can.

For assignment 1 you are to build a personal website using the HTML/CSS and Javascript skills you have learned so far. Your website can contain whatever content you want and have whatever style you choose. While there is no such thing as failing the program, the assignment will be graded according to the following criteria so you can improve next time.

Functionality

There is no point in making a practice site that does nothing useful - this will be your actual personal website. I expect you to add a fair amount of features and be able to demonstrate why they are useful. *Suggestions: Multiple sections, blog, about me, music player, animations, links to external sites, things I've learned, things I've made, progress bars*

Coding Practice

You are always, always, always going to write beautiful code. Make sure you have commented everything you are doing unless obvious. Include sufficient white space. Use proper naming conventions and do not use inline styles or scripts.

Content

A good programmer is more than just clever and fast. They are articulate and you especially require this skill. Ensure that all the content on your site is both valuable and engaging. Let your passion shine though.

Version Control

You are expected to use git for version control and github to store your work. This will be your portfolio so keep it clean, readable and use it frequently. Commit your code any time you make significant changes to earn full marks.

Additional Information

You may wonder about how we are going to put this site on the web, or link a domain name to it. Please ignore these details for now, as they will be the subject of assignment 2. There is no due date for this assignment. If you need help deciding what to put on your site ask me.

Goof Luck!

Bonus:

To earn a bonus on this assignment, tell me what the 0.0.0 means and how to use it properly.
